

TEST AUTOMATION ENGINEER

We have an exciting opportunity for a **Test Automation Engineers** or **Software Developments Engineers in Test** to join our team.

Automation engineers design, program, simulate and test websites and mobile applications in order to complete exact tasks. Work with the latest test automation tools and technologies including Selenium, Appium, Protractor, Codecept, XCUITest, Xamarin, JBehave, Cucumber, TestNG, JUnit, NUnit, Jenkins, JMeter, AWS Mobile Farm, BrowserStack, SoapUI, CodedUI, Postman, REST Assured, Report Portal, Jira, Testlink, etc.

You will work on the automation of tests for websites and mobile applications of prestigious European, US and North Asian companies.

Key Responsibilities:

- Design test plans, scenarios, scripts, and/or procedures to determine product quality
- Develop high-quality automation test engineering best practices, test strategy, and principles
- Develop, maintain and execute automation tests to ensure sufficient test coverage
- Develop testing scenarios/cases to address areas such as database impacts, software scenarios, regression testing, boundary/negative testing, error or defect retests and usability
- Follow defect tracking processes including software defect documentation, defect tracking tool utilization and ensuring open defects are monitored and escalated as needed based on aging and priority
- Closely monitor industry trends and progress in the automation tool space and develop proof of concepts as needed to validate the potential impact on our test delivery process
- Participate in automation script code reviews and provide guidance on their compliance with automation best practices
- Demonstrate skills using code repositories like GitHub
- Gain experience using CI/CD with Hudson/Jenkins in parallel tools

Required Experience/Skills:

- Java/C#/JavaScript development skills
- Strong oral and written communication skills
- Analytical mind and problem-solving aptitude
- Strong attention to detail demonstrated by ability to follow and develop specific, outlined and detailed procedures
- Strong interpersonal skills, ability to maintain good working relationships with internal and external partners
- Promote teamwork and collaborative interactions.
- Professional English

Desired Experience/Skills:

- Good understanding of the software development process including analysis, design, coding, system and user testing, problem resolution and planning
- Knowledge in QA methodology

Benefits:

- Social package (Medical insurance, petrol, food)
- QA training

Location:

- Phnom Penh Capital (Daun Penh)

About Us:

Testing Studio is a Cambodian IT company managed by French staff. We provide quality assurance testing services for websites and mobile applications.

The user experience on a mobile application or a website varies from one hardware configuration to another (desktop, tablet, smartphone, OS, browser ...). Only real conditions of use make it possible to validate the good behavior of the functionalities of your applications and responsive sites, for all your visitors (Internet users and mobile users).

Functional Testing, End-to-End Testing, Multi-Platform Compatibility Testing, Automation ... Testing Studio CO., LTD. offers its expertise in quality assurance to all stakeholders (Start-up, SMEs, Key Accounts, France and International) whatever the activity (Luxury, E-commerce, Leisure, Air, Retail, BtoB, BtoC ...).
